Bromic builder program: one-pager and Good–Better–Best outdoor heating guide

A Good–Better–Best outdoor heating package for home builders: three complete tiers with heaters, controls and pre-wire, plus the Bromic builder program.

EDITION
October 2026

BROMIC HEATING
bromic.com

Bromic builder program

Your buyers already stand on the patio and picture the evenings. Heat is what lets them stay out after the sun goes down. Most packages stop at the slab and the pergola; this one adds a complete, pre-wired outdoor heating option at three price points, so your sales team sells heat the same way it sells cabinets.

Modern pool house with heaters under the cantilever

Part 1: The one-pager

Headline

Sell the evening, not just the patio. Pre-wired Bromic radiant heat in three ready packages, designed in at framing, not added later.

Why heat belongs in the options sheet

1. The patio is standard. 60.5% of single-family homes started in 2025 came with a patio.[1] The average new-home patio is about 320 ft².[2]

2. Buyers ask for it. 86% of recent and prospective buyers rate a patio essential or desirable, level with the laundry room as the most-wanted feature.[3]

3. Heat is the gap. Only 23% of homeowners prioritise outdoor heating at the planning stage, yet 67% say heating extends how much they use their outdoor space.[4] That gap is the upgrade.

What the program gives you

Every item below is a proposal until confirmed. Nothing here is a price, margin or lead-time commitment.

BENEFIT	WHAT IT MEANS FOR YOUR TEAM	STATUS
Three ready packages	Good, Better, Best, each a complete system with heaters, controls and pre-wire scope	Draft (Part 2)
Complimentary design service	Heater selection, placement and coverage drawings from your plans or photos[5]	Live

BENEFIT	WHAT IT MEANS FOR YOUR TEAM	STATUS
Pre-wire and rough-in guide	One page your electrician can price from (asset:A16)	In development
Builder pricing	Tiered trade pricing by volume	
Margin structure	Suggested option pricing for your sales sheet	
Supply and lead times	Stocking and delivery commitments	
Model home support	Display units or demo programme	
Sales training	Short session for design-centre staff	
Installer support	Technical line, 1-800-301-1293, Mon–Fri 9–4 PT[5]	Live
Warranty	Manufacturer warranty per series	
Co-marketing	Brochure inserts, imagery for your listings	
Program contact	Named regional contact	

Who it is for

Production and semi-custom builders with an outdoor living package, custom builders who want a standard heating detail, and remodelers who add covered patios.

Part 2: Good–Better–Best guide

Each tier is a complete working solution: heaters, the controls to run them, mounting, and the rough-in your electrician installs at framing. Controls are part of every tier, never an add-on. Wi-Fi and app features require compatible Affinity Smart-Heat Controls, sold separately; they are included in the tier where listed.[5]

Tiers are shown for one covered patio. Heater count depends on the patio's size, height and exposure; coverage per heater is approximate and varies with model, mounting height, environment and installation.[5] Bromic's design team confirms the count and positions for each plan.

	GOOD	BETTER	BEST
The moment	Dinner outside on a cool evening	The patio as an everyday room, morning to late	An outdoor room as finished as the inside
Heater	Platinum Smart-Heat Electric, wall- or ceiling-mounted	Platinum Smart-Heat Electric, recessed flush in the soffit	Platinum Smart-Heat Electric recessed, plus Eclipse Smart-Heat Electric pendant over dining; Tungsten Smart-Heat Electric Select or Coastal (coming soon) as the recessed upgrade
Output and finish	2300 W or 3400 W; Black or White[5]	3400 W or 4500 W; Black or White	Platinum 3400 W or 4500 W; Eclipse with dimmable rim lighting, Black

	GOOD	BETTER	BEST
Approx. coverage per heater	65–143 ft² by model[5]	65–143 ft² by model	Platinum 65–143 ft²; Eclipse 121 ft²; Tungsten 64–144 ft² (coming soon)
Mounting	Wall or ceiling bracket	Recess kit[6]	Recess kit; Eclipse on single, double or curved pole
Controls (required)	Affinity Smart-Heat On/Off controller + manual wall switch	Affinity Smart-Heat Dimmer controller + manual wall switch + Bromic Smart-Heat app (schedules, timers)	Affinity Dimmer controller (Platinum) + Affinity Eclipse controller + wall switches + app with zones; integration with Control4, Crestron or Lutron where the home has it (compatibility varies; may need extra integration hardware)[5]
Zones	One	One or two	Two or more (dining, lounge)
Pre-wire scope	Dedicated circuit(s), box at heater, box at switch	Dedicated circuits, recess framing and blocking, controller location, Wi-Fi coverage	As Better, plus pendant structure, extra zone circuits, integrator coordination
Option price to buyer			
Builder cost			
Lead time			

Courtyard dining table with a black wall heater

Good: heat where people sit

A wall- or ceiling-mounted Platinum heater aimed at the table. One zone, one switch, one controller. The simplest pre-wire and the easiest line on the options sheet. Marine variants suit coastal lots.[5]

Better: heat you can feel, not see

Platinum recessed flush into the soffit with Bromic's recess kit, so the ceiling stays clean.[6] The Affinity Dimmer controller lets owners turn the heat down on mild nights, and the Smart-Heat app sets schedules and timers. This is the tier to show in the model home.

Ocean-view outdoor living room with recessed heaters

Best: an outdoor room

Recessed Platinum over the lounge, Eclipse pendants over the dining table for heat and light in one, separate zones, and integration with the home's automation system where it has one. For buyers who want the newest design, offer Tungsten Select or Coastal (coming soon) as the recessed heater once Bromic confirms availability.

Eclipse pendants above a long candlelit dining table

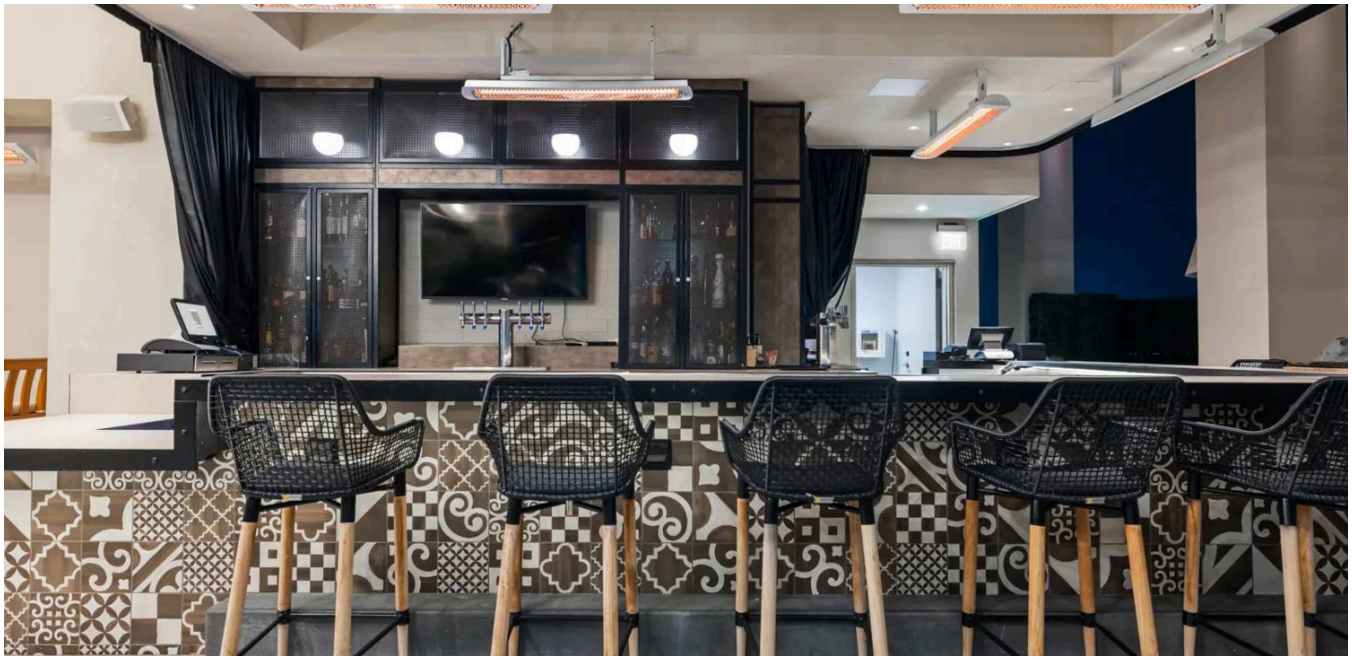

How do you sell it?

- **Show it lit.** A heated model-home patio at dusk does the selling.
- **Price the pre-wire, even when buyers decline.** A rough-in at framing costs far less than opening a finished soffit later, and lets buyers add heat after closing.
- **Lead with the moment, then the tier.** "Dinner outside in October" sells better than a wattage.

- **Keep controls in the price.** A heater without its controller is not a finished option.

Planning checklist

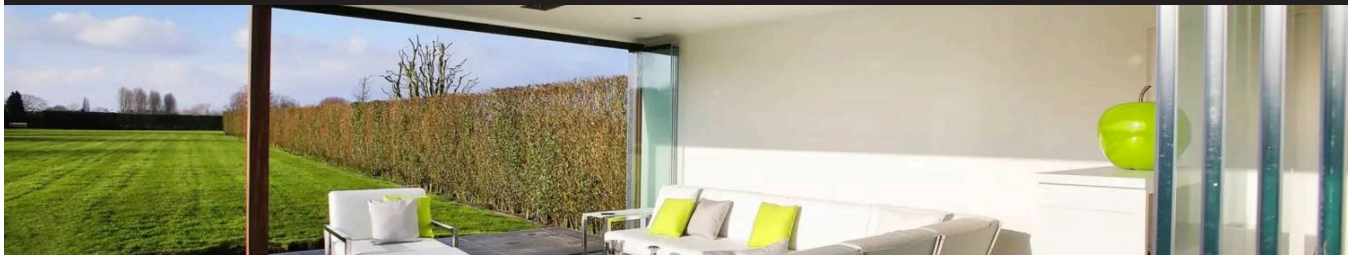

- [ ] Choose which plans get the program; mark the patio on each.
- [ ] Send plans to Bromic's design team for heater counts and positions per tier.
- [ ] Add Good, Better and Best to the options sheet with confirmed prices.
- [ ] Add the rough-in scope to the electrician's framing checklist (see the pre-wire guide).
- [ ] Brief the design-centre team; install the Better tier in the model home.
- [ ] Electrical work by a licensed electrician to NFPA 70 as adopted locally; confirm with the local building authority.[6]

Book a design consult and we will size all three tiers for your lead plan.
